

## Partnerships in Supply Chain Innovation

# TURVO ROI SNAPSHOT: Ryder System, Inc.

### The Business Challenge

Ryder needed the ability to connect its supply chain – including shippers, receivers, carriers and service providers – in a single network environment to break down the silos created by disparate technology and manual processes and offer its customers the ease of use of modern, cloud technology.

### The Solution

Ryder partnered with Turvo to integrate data silos and enable collaboration across the supply chain in real-time with RyderShare. With Turvo's collaborative logistics platform, Ryder integrates data from multiple TMS and WMS systems into a single, synergistic platform for seamless execution and end-to-end visibility. The network effect of Turvo's platform allows users to collaborate in real-time to better manage exceptions and eliminate the inefficiencies of check-calls, rework and manual data entry that permeates the industry.

**Turvo aggregates the entire supply chain into a single source of the truth for faster speed to market, better customer service, and increased profitability—all while maximizing the ROI of existing tech stacks and automating processes.**

*"RyderShare has been a game changer for us. Tracking and tracing loads that used to take hours of phone calls and emails now takes minutes, and that enables our member-owned stores to better plan for on-time deliveries and for our teams to more efficiently manage their time."*

**Tim Miller**  
Vice President of Logistics  
Do It Best

*"Now more than ever, there is a heightened awareness and greater sense of urgency for real-time visibility and the ability to work together to ensure the on-time delivery of essential raw materials and finished goods. RyderShare with Turvo's collaborative logistics tool delivers these capabilities – all executed by logistics professionals with the experience to make meaningful changes."*

**Steve Sensing**  
President of Global Supply Chain Solutions  
Ryder System, Inc.

The ROI

200%

Increase in revenue recognition with real-time document capture of PODs (from 5 days to same day)

99%

Increased on-time performance up from 95%

50%

Increase in productivity

35%

Labor efficiency savings to more effectively plan for receiving dock labor
